

Safety Findings of the DREAMM-2 Study

Finding Occurrence

Adverse Reactions – All Grades

Most common ($\geq 20\%$)

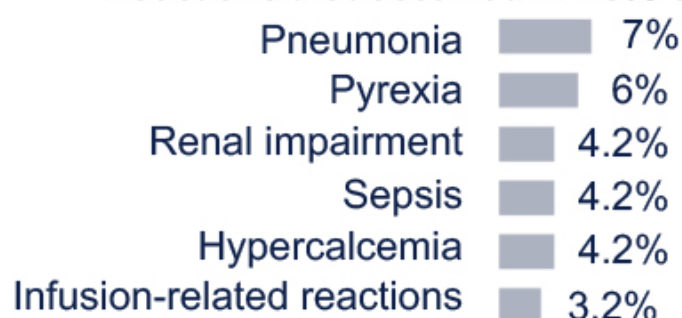

Adverse Reactions – Grades 3-4

Most common ($\geq 20\%$)

Serious Adverse Reactions – Occurred in 40% of patients

Reactions that occurred in $>3\%$ of patients

Fatal Adverse Reactions – Occurred in 3.2% of patients

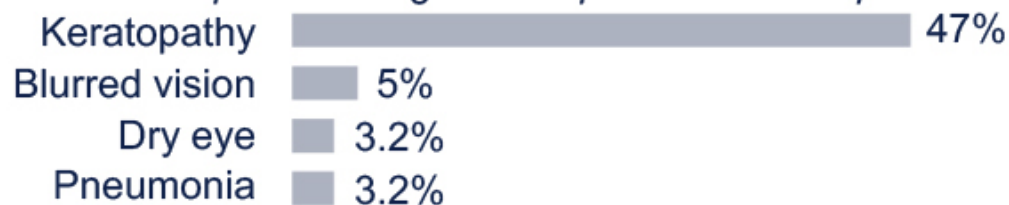

Permanent Discontinuation – Occurred in 8% of patients

Most frequent cause

Dosage Interruption – Occurred in 54% of patients

Adverse reactions that required dosage interruption in $>3\%$ of patients

Dose Reduction – Occurred in 29% of patients

Adverse reactions that required dose reduction in $>3\%$ of patients

Laboratory Abnormalities – Grades 3-4

Most common ($\geq 5\%$)
